Adding a PC connection with web based software to Arvo-Tec feeding system gives access to clear, easy to use graphic interface with optimized functions for managing your farm with ease.

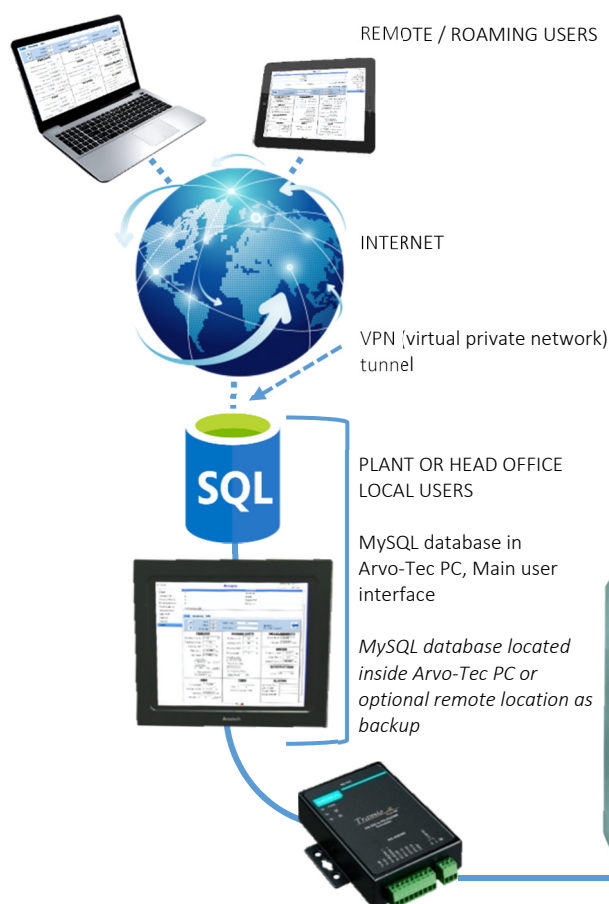

Control PC works as a central user interface to the system enabling control of all WOLF-control units, probes, feeders and other connected equipment from one point.

Quick overview of your measurements, alarms and detailed tank status.

Create day reports, feed reports and store all your data.

Export data to be used by 3rd party software e.g. Excel, Fishtalk.

System is accessible using a browser anywhere through VPN, enabling secure online water quality -and feeding monitoring. PC connection enables on-line support from Arvo-Tec service team should the need arise.

	11 Formula11

One of the several tools built in to ArvoPRO are the feeding formulas.

These formulas are unique to Arvo-Tec systems and are used globally in fisheries and hatcheries with Arvo-Tec equipment.

These formulas have been adjusted for each fish species listed, making use of an energy demand model that takes into account the water temperature and size of the fish.

Pre-set / Manual / Customisable formula options.

Once set up correctly ArvoPRO will log all your data, create reports, measure water quality, calculate fish growth, generate alarms and adjust feeding in real time to maximize fish growth with minimal labour.

Arvo-PRO has several reporting tools for the day to day runnings of a commercial fishery.

Day reports with each tanks details are generated daily.

Separate feed reports showing today's feedings to help you manage feed stores.

Weighing report tool is an additional simple 3-stage tool for record keeping.

PDF or XLR format day- and feed reports.

Export data to 3rd party software.

dayreport.pdf 1 / 1

Use the datalogging tool to track, compare and study all collected data like: power consumption, water usage, water quality changes and more, to understand and improve your farms performance.

Manually enter water temperature and oxygen level to start feeding or connect the desired probes for more accurate water quality and feeding control.

Set measurement warning and alarm levels.
Clear OK-, Warning- and Alarm indicators.

Define alarms from analog mA signal connected to the control unit.

External alarms & on/off signal output.

Set individual alarm parameters for each control unit.

Multiple ways to set up alarms and alarm related behaviour for *groups and tanks*.

Keep a log of occurred alarms and optionally send out GSM alarms.

ARVO-TEC PROFESSIONAL FEEDING CONTROL SYSTEM

ARVO-TEC PROFESSIONAL CONTROLLER – WOLF

The Arvo-Tec control unit WOLF is a fully integrated feeding, measurement, photo period-light control and alarm system.

The system uses environmental parameters like water temperature, oxygen content and biomass as initial data and controls feeding according to mathematical energy demand model.

The system estimates fish growth based on the feed conversion factor. There are a number of fish species available as pre-programmed options and level of feeding can be adjusted as needed manually. Pre-set feeding formulas for several fish species.

Control the day/night cycle of through photo period control. Inbuilt generator controls & optional battery for barge based operation. Menu driven display in control unit or an optional MS Windows based PC-connection with web-based software.

Arvo-Tec controller is cased in stainless steel cabinet for extreme conditions.

TECHNICAL SPECIFICATIONS

- 115 OR 240 VAC
- 8,16,24 OR 32 INDEPENDENT FEEDER CHANNELS PER CONTROL UNIT
- MAXIMUM 30 CONTROL UNITS IN ONE SYSTEM = 960 CHANNELS
- CABLE, RADIO, TCP/IP AND MOBILE COMMUNICATION OPTIONS
- 8 MEASUREMENT INPUTS PER CONTROL UNIT
- 5 DIGITAL SENSOR INPUTS (E.G. LEVEL SWITCH CIRCUITS)
- 2 ALARM/CONTROL OUTPUTS PER CONTROL UNITS
- OPTIONAL MS WINDOWS BASED PC-CONNECTION
